The Trip

Annapurna Circuit Trek is one of the most adventurous and famous treks in the world that offers lifetime experiences. It encompasses a complete scenic journey beneath the world's 7th and 10th highest peaks namely Annapurna (8,091 m) and Dhaulagiri (8,167m) that plunges below the Kali Gandaki River. This forms the deepest gorge as the walk leads on both sides of Annapurna Mountain Range starting from the north and ending in the southern region. Moreover, this adventurous trek offers you panoramic views of peaks namely Gangapurna, Lamjung Himel, Mount Manaslu, Pisang Peak, Chulu East, Chulu West, Nilgiri, Tukucho Peaks and Macchapuchre (Fishtail). The view of the world's highest mountains glowing in the pastel light of dawn and dusk will take your breath away for a moment.

Firstly, the Annapurna Circuit Trek takes you up to the Marsyangdi River, and then you will cross the fantastic "Thorong-La" pass (5416m) and complete the route while descending through the Kali Gandaki River. During the Trek, you go around the Annapurna ridge, which includes the highest peaks; among them, some are over 8000m. You will be following different valleys and canyons and also walk besides rushing streams, which pound over white granite rocks and through deep pools. The exploration of lush fields and forests to the mountains into the desert-dry Trans will be one of kind experiences you will ever receive.

Thoughtful travel

The natural environments that you'll travel through are fragile; the cultures and traditions precious and often the communities we pass through are reliant on tourism. It is our responsibility as visitors to minimize the impact of our presence, protect what is precious and where we can leave a positive impact.

Trip grading

Introductory to Moderate

These adventures involve trekking for up to 6 or 7 hours a day at a steady pace. These trips may spend successive days at altitudes not generally exceeding 5416m and are usually between 09 and 15 days in duration. You will need a good level of fitness and be in good health.

Suggested preparation

45 minutes of aerobic type exercise, three to five times a week for the three months leading up to your trip. Hill walking with a pack in variable weather conditions or road cycling is also recommended depending upon the activity you plan to undertake.

Adventure travel

By its very nature adventure travel involves an element of the unexpected. In remote and developing countries do not expect standards you are used to at home. Remote areas are sometimes unpredictable and itineraries may be altered. To get the most out of your adventure it is important that you are flexible, positive and eager to take on all the challenges that arise. If you are uncertain about your suitability for this trip we recommend that you speak with your guide or tour leader.

Himalayan environment. Oxygen particles start getting sparse, and air density gets thin at a higher altitude above 2000 meters. We have a pattern to follow while we walk on higher elevation to prevent us from Acute Mountain Sickness (AMS). Pacing the steps could result in AMS. The common symptoms like difficulty in breathing, headache, nausea, headache, dizziness, insomnia, vomiting, etc. could show up. One should never ignore the signs mentioned above. If untreated, it will result in High Altitude Cerebral Edema (HACE) and High Altitude Pulmonary Edema (HAPE). HACE AND HAPE affect brain and lungs filling fluid inside and could be fatal to the patient.

We design our itinerary in such a way that you will have sufficient time for acclimatization. You will have one or two rest days in lower elevations before you climb higher than 3500 meters. Rest day usually means you will utilize this day by stretching your legs to hike certain height and return to your teahouse. Besides, our guides will always carry a first aid kit, including Diamox, which is a pill to prevent AMS symptoms. However, you should follow the instructions of the guide and keep yourself hydrated. Avoid alcoholic and caffeinated drinks, which will cause dehydration.
